DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 2, 4-8, 17-22, 24-27, 29, 40, 42, 44, 46, 48, and 55 (renumbered 1-30) are allowed. The following is an examiner's statement of reasons for allowance:

The closest prior art of record is Lemoine, which, as best depicted in Figure 1, discloses the manufacture of a floor covering from a plurality of agglomerated particles, wherein said agglomerated particles are defined by multi-colored particles (1,3,5,7). In this instance, a plurality of differently colored particles are mixed and laminated into a consolidated sheet 13 and subsequently shredded to form a plurality of jaspe agglomerated particles (clusters of differently colored particles exhibiting striped or streaked appearance) deposited onto conveyor 21. The different colored particles are seen to constitute "a first particle having a first visual characteristic and a second particle having a second visual characteristic (color) different than the visual characteristic of said first particle. It is emphasized that, contrary to applicant's arguments, the language "agglomerated particles" is not seen to define over the particles of Lemoine. In this instance, however, Lemoine teaches that the above noted agglomerated particles are formed by shredding/cutting said consolidated sheet into parallelepipeds, preferably cubes (Column 3, Lines 30-40). Thus, all of the surfaces of the jaspe agglomerated particles are not irregular and one of ordinary skill in the art at the time of the invention would not have found it obvious to modify the method and article of Lemoine to include the claimed contour of the surfaces of jaspe agglomerated particles.
